

New Voting Equipment for Stanislaus County

The Stanislaus County Registrar of Voters is pleased to announce the arrival of our new voting system!

Our new voting system provides modern, secure voting with true transparency and accessibility for all. With the new voting system, all voters can vote privately and independently and trust that their voices are heard.

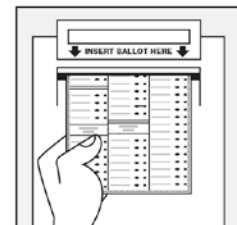

Accessibility at the polling location

Each polling location in Stanislaus County has a touch screen ballot marking system that can be used by all voters. Accessibility options included on the ballot marking system are:

- An audio option that reads the ballot to you
- A universal plug for adaptive device compatibility
- Tactile navigation
- Adjustable display text and contrast
- A choice of English or Spanish

Cast your ballot at the scanner

After you have marked your ballot by hand or with the ballot marking system, take it to the ballot scanner and insert your ballot. If you made a mistake, such as voting for too many candidates, the scanner will eject your ballot so you can correct it.

For more information you can:

 Call the elections office at 209-525-5200
